1 [Research session: integration and mapping #1: Light-weight domain-based form assistant: querying web databases on the fly](#)

Zhen Zhang, Bin He, Kevin Chen-Chuan Chang

 August 2005 **Proceedings of the 31st international conference on Very large data bases VLDB '05**

Publisher: VLDB Endowment

 Full text available: [pdf\(311.86 KB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The Web has been rapidly "deepened" by myriad searchable databases online, where data are hidden behind query forms. Helping users query alternative "deep Web" sources in the same domain (e.g., Books, Airfares) is an important task with broad applications. As a core component of those applications, dynamic query translation (*i.e.*, translating a user's query across dynamically selected sources) has not been extensively explored. While existing works focus on isolated subproblems (

2 [Session 12: languages and runtime libraries: Communication and memory](#)

[requirements as the basis for mapping task and data parallel programs](#)

Jaspal Subhlok, David R. O'Hallaron, Thomas Gross, Peter A. Dinda, Jon Webb

 November 1994 **Proceedings of the 1994 ACM/IEEE conference on Supercomputing Supercomputing '94**

Publisher: ACM Press

 Full text available: [pdf\(1.10 MB\)](#)

 Additional Information: [full citation](#), [abstract](#), [references](#)

For a wide variety of applications, both task and data parallelism must be exploited to achieve the best possible performance on a multicomputer. Recent research has underlined the importance of exploiting task and data parallelism in a single compiler framework, and such a compiler can map a single source program in many different ways onto a parallel machine. The tradeoffs between task and data parallelism are complex and depend on the characteristics of the program to be executed, most signif ...

1 [Demonstrations: Virtual Oregon: seamless access to distributed environmental information](#)

Dylan Keon, Cherri Pancake, Dawn Wright

 July 2002 **Proceedings of the 2nd ACM/IEEE-CS joint conference on Digital libraries JCDL '02**

Publisher: ACM Press

 Full text available: [pdf\(89.14 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Virtual Oregon is a new data coordination center established at Oregon State University (OSU) in order to: (1) archive environmental and other place-based data on Oregon and associated areas; (2) make those data accessible to a broad spectrum of agencies and individuals via innovative web interfaces; (3) identify key data sets that are not yet available and encourage their collection and dissemination; and (4) facilitate development of statewide standards for archiving, documenting, and dissemination ...

Keywords: data access, data coordination, distributed computing, distributed databases, map servers, web GIS

2 [Dynamic personalization and information integration in multi-channel data dissemination environments](#)

Koichi Goto, Yahiko Kambayashi

 May 2001 **Proceedings of the 2nd ACM international workshop on Data engineering for wireless and mobile access MobiDe '01**

Publisher: ACM Press

 Full text available: [pdf\(670.84 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We have been developing mobile passenger support systems for the public transportation. In this application field, various kinds of data must be handled and integrated. Examples of such data are route information, fare information, area map, station map, planned operation schedule, real-time operation schedule, vehicle facilities etc.

Depending on the user situation, different information should be supplied and personalized. In this paper we propose the human support system used in the ...

Keywords: information integration dynamic personalization, mobile terminal, multi-channel data dissemination, public transportation

3 Recognizing communication patterns: Audio-visual cues distinguishing self- from system-directed speech in younger and older adults

Rebecca Lunsford, Sharon Oviatt, Rachel Coulston

October 2005 **Proceedings of the 7th international conference on Multimodal interfaces ICMI '05**

Publisher: ACM Press

Full text available:  [pdf\(354.40 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In spite of interest in developing robust open-microphone engagement techniques for mobile use and natural field contexts, there currently are no reliable techniques available. One problem is the lack of empirically-grounded models as guidance for distinguishing how users' audio-visual activity actually differs systematically when addressing a computer versus human partner. In particular, existing techniques have not been designed to handle high levels of user self talk as a source of "noise," a ...

Keywords: gaze, individual differences, intended addressee, multimodal interaction, open-microphone engagement, spoken amplitude, system adaptation, universal access, user modeling

1 [Large-scale space object tracking using APL2](#)

Jack G. Rudd, Richard A. Marsh, Marcus L. Munger

July 1998 **ACM SIGAPL APL Quote Quad , Proceedings of the APL98 conference on Array processing language APL '98**, Volume 29 Issue 3

Publisher: ACM Press

Full text available: [pdf\(701.57 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The number of space objects in earth orbit has increased steadily from the launch of the first space object (Sputnik) to the current level of approximately 10,000. The North American Defense Cheyenne Mountain Operations Center (CMOC), operated by the United States and Canada, provides continuous tracking of this growing constellation of space objects, including active and inactive satellites and space debris. This mission is accomplished for the most part using radar stations and ground-based op ...

2 [Engineering drawings and CAD data: Integrated feature-based and geometric CAD data exchange](#)

Steven Spitz, Ari Rappoport

June 2004 **Proceedings of the ninth ACM symposium on Solid modeling and applications SM '04**

Publisher: Eurographics Association

Full text available: [pdf\(2.16 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Data exchange between CAD systems is an extremely important solid modeling concept, fundamental both for the theory of the field and for its practical applications. The two main data exchange (DE) paradigms are geometric and parametric DE. Geometric DE is the ordinary method, in which the boundary representation of the object is exchanged. Parametric (or feature-based) DE is a novel method where, given a parametric history (feature) graph in a source system, the goal is to construct a graph in t ...

Nothing Found

Your search for **+abstract:source +abstract:data +abstract:object +abstract:target +abstract:field +abstract:object +abstract:business** did not return any results.

You may want to try an [Advanced Search](#) for additional options.

Please review the [Quick Tips](#) below or for more information see the [Search Tips](#).

Quick Tips

- Enter your search terms in lower case with a space between the terms.

sales offices

You can also enter a full question or concept in plain language.

Where are the sales offices?

- Capitalize proper nouns to search for specific people, places, or products.

John Colter, Netscape Navigator

- Enclose a phrase in double quotes to search for that exact phrase.

"museum of natural history" "museum of modern art"

- Narrow your searches by using a + if a search term must appear on a page.

museum +art

- Exclude pages by using a - if a search term must not appear on a page.

museum -Paris

Combine these techniques to create a specific search query. The better your description of the information you want, the more relevant your results will be.
